

Expert Testing and Consulting Services

**JumpStart**

Get a faster return  
on your investment

**TCT's Training & Mentoring services - designed to help you get a faster return on your HP investment.**

Led by an HP Certified Instructor and a tool-specific HP Accredited Systems Engineer (ASE), your JumpStart program will help your team build confidence using your HP tools and provide a solid foundation for future projects.

From a few days to several weeks, the length of the JumpStart program varies with each project and with the technical knowledge and tool-competency of your team. We'll develop a custom plan to meet your specific needs.

In addition to public or onsite training, we also provide onsite consulting and mentoring for installation and setup, design, scripting, testing and evaluation – getting you off to a great start with your HP Software investment.

**JumpStart Services typically include:**

**Training**

- Onsite training – we come to your location.
- Public training – you come to one of our three locations. You can also enjoy the same class from the comfort of your location by attending a live, online, instructor-led class.

**Mentoring**

- Providing technical assistance at your location in your environment.
- Assisting in refining your Best Practices.
- We do the work with you, not for you – providing hands-on experience with expert guidance.
